

Male

Inferti l i ty

All providers/facilities/organizations are listed in alphabetical order. Please note that this list may not be comprehensive.

Approximately 30% of infertile couples are infertile because of a male factor. Another 30% include both male and female factors. Another 30% are due to female factors and 10% are unexplained. Thus male factors contribute to the infertility problems of at least 60% of infertile couples. A urologist may be able to best assess male factors. A semen analysis can be obtained through a primary care physician, specialist, health center, or even the female partner's OB-Gyn.

This directory is part of a series of lists of New York State providers (and other states where appropriate) who offer services that may be of interest to women or men hoping to bring a child into their lives. Please note that these lists are not comprehensive, nor does Infertilityeducation.org or Ferre Institute offer assurance or warranty for any of the providers listed.

We hope you find these directories useful. Please feel free to contact us with additions or edits to our list and we would be glad to review.

To find out more about NYS laws regarding insurance coverage and information about grant programs which provide funding for certain infertility treatments, please see the NYS Insurance Law Fact Sheet at www.infertilityeducation.org/services.php.
